

Introductory Chemistry: Interactive

The Introductory Chemistry: Interactive CD-ROM is designed specifically for the one-term introductory course taken by non-science majors or by science majors in preparation for a full-year general chemistry course. The CD-ROM includes animations, video clips, molecular models that rotate in three dimensions, an interactive periodic table, and algorithm-based problem sets that generate nearly limitless numbers of solutions to give students extra practice in problem-solving. The Classroom Management System CD enables instructors to create class rosters, create practice sessions and tests, and view individual students performance on a practice session or test.
